Retail Sales Analytics Dashboard

Data Analytics project

Presented By:
Fathima Nahla Noushad

Tools:
Python | Pandas | Plotly | Streamlit

Project objective

The objective of this project was to analyze retail sales data from 2021–2024 and transform raw business data into actionable insights through data cleaning, exploratory analysis, KPI development, and an interactive dashboard.

Goals

- Analyze sales performance across different dimensions
- Identify trends, patterns, and business opportunities
- Calculate key business performance indicators (KPIs)
- Develop an interactive dashboard for decision-making
- Present findings and recommendations to stakeholders

Data Preparation Process

- ✓ Removed Duplicates
- ✓ Date Formatting
- ✓ Data Validation
- ✓ Missing Value Handling
- ✓ Standardized Categories
- ✓ Created Clean Dataset

Business Performance Summary

Revenue
\$32.1M

Profit
\$9.4M

Orders
80,000

AOV
\$401

Margin
29.3%

The company demonstrates strong profitability and healthy order volume.

Interactive Dashboard

Features

- KPI Monitoring
- Monthly Sales Trend
- Category Analysis
- Customer Analysis
- Region Comparison
- Dynamic Filters

Top 5 Insights

Revenue exceeded \$32M

Profit margin reached 29.3%

Seasonal sales peaks occur every year

Top customers contribute a large share of revenue

Regional sales and profit performance differ
